(1) Numeric search field that may be searched with numeric operators or ranges.
(2) Either STN format or Derwent format may be used.
(3) Search with implied (S) proximity is available in this field.
(4) An online thesaurus is available for this field.
(5) This field contains the classifications and catchwords for main classification subject headings and subheadings from the current (7th) edition of the WIPO International Patent Classifications (IPC) manual. To search the classifications from any of the specific editions (1-8) of the IPC manual, use the field code followed by the edition number, e.g., /IC2, ICM2, /ICS2 for the 2nd edition. Catchwords are included only in the fields for the 7th, 6th, and 5th editions of the IPC manual.
(6) This field is range-searchable in Manual of Classification order. However, it is not a numeric field and may not be searched using numeric operators.
(7) Available for patent documents published starting in 2001.
(8) U.S. provisional priority numbers are searched only with the P appended, e.g., US1999-121903P/PRN.
(9) These fields have not been populated since December 31, 2005 with the introduction of IPC Reform.
(10) When searching combinations of CPC and CPC.KW data, use (S) proximity operator.
(11) Application numbers for U.S. utility patents from series code 13 forward, design patents (series code 29) and provisional patent applications (series code 60 and 61) may be searched either with or without their series code. Include the series code if known to ensure precision. Note that provisional patent application numbers searched without their series codes must have a P appended to the end of the number (e.g., US2013-686038P). Series code information is not available for U.S. patent application numbers with series codes below 13.
(12) Available for selected patent documents usually from September 2012 or later.

Property Fields(1)

In USPATFULL a numeric search for a specific set of physical properties (/PHP) is available within the Basic Index fields (most notably TI, AB, CLM, DETD, and SUMM). The numeric values are not displayed as single fields, but ARE instead highlighted within HIT, KWIC and ALL displays.

EXPAND in the /PHP field to find numeric properties of interest, or type HELP NPS at an arrow prompt while in USPATFULL to see a list of all available numeric properties. The /PHP index contains a complete list of codes and related text for all physical properties available for numeric property searching in USPATFULL.

Thesaurus Fields

A thesaurus is present for the National Patent Classification fields (/INCL, /INCLM, /INCLS, /NCL, /NCLM, /NCLS, /RPCL) and the International Patent Classification fields. The classifications and catchwords for the main headings and subheadings from the 7th edition of the WIPO International Patent Classification (IPC) manual are available in the following fields: /IC, /ICM, /ICS, /IPCI, and /IPCR. The classifications from the previous editions (1-7) are also available as separate thesauri. To EXPAND and SEARCH in the thesauri for editions 1-8, use the field code followed by the edition number, e.g., /IC2, /ICM2, /ICS2 for the 2nd edition. Catchwords are included only in the thesauri for the 8th, 7th, 6th, and 5th editions.

ABSTRACT:

The present invention relates to a method for treatments relating to bipolar
disorder in a mammal, including a human, the treatments including treatment of
rapid-cycling bipolar disorder, treatment of symptoms of bipolar disorder
selected from the group consisting of acute mania and depression, treatment for
effecting mood stabilization; treatment for preventing relapse into bipolar
episodes, and for the treatment of suicidal thoughts and tendencies associated
with bipolar disorder, comprising administering to said mammal an effective
amount of a compound of the formula I:   ##STR1##
or a pharmaceutically acceptable acid addition salt thereof, wherein Ar, n, X,
and Y are as defined.

[0001] This application claims priority under 35 U.S.C. 119 of U.S. Provisional
60/471,450, filed May 16, 2003. The entire contents of the prior application
are incorporated herein by reference.

FIELD OF THE INVENTION

[0002] The present invention relates to the treatment of bipolar disorder in a
mammal, including a human. More specifically, the present invention is directed
to the treatment in a mammal, including a human, of rapid-cycling bipolar
disorder, and for the treatment of symptoms of bipolar disorder, such symptoms
selected from the group consisting of acute mania and depression. The present
invention is also directed to a treatment method for effecting mood
stabilization in a person afflicted with bipolar disorder. The present
invention further relates to a method of preventing relapse into bipolar
episodes in a person afflicted with bipolar disorder. The present invention is
further directed to the treating suicidal thoughts and tendencies in a person
afflicted with bipolar disorder. The present invention also relates to new
therapeutic uses for piperazinyl-heterocyclic compounds of the formula I, as
defined below, for example ziprasidone.
```

BACKGROUND OF THE INVENTION

[0003] The piperazinyl-heterocyclic compounds of formula I of this invention are disclosed in U.S. Pat. Nos. 4,831,031 and 4,883,795, both of which are assigned in common with the present application. Certain treatments for such compounds are disclosed in U.S. Pat. Nos. 6,127,373, 6,245,766, and 6,387,904, all of which are also assigned in common with the present application. The patents listed in this paragraph are incorporated by reference in their entireties into the present disclosure.

SUMMARY OF THE INVENTION

[0004] The present invention relates to the use of piperazinyl-heterocyclic compounds of the formula I, as defined below, in methods for the treatment of bipolar disorder in a mammal, including a human. Specifically, the present invention is directed to a method for the treatment in a mammal, including a human, of rapid-cycling bipolar disorder, a method for the treatment of symptoms of bipolar disorder, such symptoms selected from the group consisting of acute mania and depression; a method for a treatment that effects mood stabilization in a person afflicted with bipolar disorder; a method for a treatment that prevents relapse into bipolar episodes in a person afflicted with bipolar disorder; a method for the treatment of suicidal thoughts and tendencies in a person afflicted with bipolar disorder; such treatments comprising administering a pharmaceutically effective amount of a compound of the formula I: ##STR2##

[0021] The psychiatric disorders and conditions referred to herein are known to those of skill in the art and are defined in art-recognized medical texts such as the Diagnostic and Statistical Manual of Mental Disorders, Fourth Edition, American Psychiatric Association, 1994 (DSM-IV), which is incorporated herein by reference in its entirety.

DETAILED DESCRIPTION OF THE INVENTION

[0022] The piperazinyl-heterocyclic compounds of formula I can be prepared by one or more of the synthetic methods described and referred to in U.S. Pat. Nos. 4,831,031 and 4,883,795. U.S. Pat. Nos. 4,831,031 and 4,883,795 are incorporated herein by reference in their entireties.

• • •

[0032] When an active compound of this invention is to be used in a human subject to treat psychiatric conditions whose manisfestations include psychiatric symptoms or behavioral disturbance, the prescribing physician will normally determine the daily dosage. Moreover, the dosage will vary according to the age, weight and response of the individual patient as well as the severity of the patient's symptoms. However, in most instances, an effective amount for treating the psychiatric conditions described herein, will be a daily dosage in the range from about 0.5 to about 500 mg, more specifically

about 10 mg a day to about 200 mg a day, relatively more specifically about 20 mg a day to about 180 mg a day, relatively still more specifically about 30 mg a day to about 170 mg a day, and relatively even more specifically from about 40 to about 160 mg a day, in single or divided doses, orally or parenterally. In some instances it may be necessary to use dosages outside these limits. The receptor binding and neurotransmitter uptake inhibition profile for Ziprasidone, 5-(2-(4-(1,2-benzisothiazol-3-yl)piperazinyl)ethyl)chlorooxindole, was described in The Journal of Pharmacology and Experimental Therapeutics, 275, 101-113 (1995), which is incorporated herein by reference in its entirety. A summary of its affinity for various receptors in the central nervous system tissue is presented in Table 1.

[0033] The following examples illustrate methods of preparing various compounds of formula I.

EXAMPLE 1

[0034] 6-(2-(4-(1-Naphthyl)piperazinyl)ethyl)-benzoxazolone

[0035] A. To a 500 ml three-necked round-bottomed flask equipped with mechanical stirrer and nitrogen inlet were added 200 grams of polyphosphoric acid, 13.51 grams (0.1 mole) of benzoxazolone, and 13.89 g (0.1 mole) of bromoacetic acid. The reaction was heated with stirring at 115° C. for 2.5 hours and poured into 1 kg ice. The mixture was stirred mechanically for 1 hour to form a purple solid, which was then filtered off and washed with water. The solid was slurried with acetone for 30 minutes, a small amount of purple solid filtered off, and the brown filtrate evaporated. The resulting dark brown gum was slurried with 150 ml ethanol for 30 minutes, and the brown solid filtered off and washed with ethanol. This solid has a m.p. of 192°-194° C.

[0036] The solid (6.6 grams, 0.0257 mole) was placed in a 100 ml three-necked round-bottomed flask equipped with magnetic stirrer, dropping funnel, thermometer, and nitrogen inlet and 19.15 ml (0.257 mole) of trifluoroacetic acid added. Triethylsilane (9.44 ml, 0.0591 mole) was added dropwise to the stirring slurry over 30 minutes. The reaction was stirred overnight at room temperature, then poured into 150 grams ice. The mixture was stirred for 15 minutes, and the brown gum filtered off. The gum was dissolved in 100 ml ethyl acetate, and 125 ml cyclohexane added, giving a brown precipitate, which was filtered and washed with cyclohexane. The filtrate was evaporated and the resulting yellow solid slurried with 50 ml isopropyl ether the pale yellow solid was filtered off and dried to give 2.7 g 6-(2-bromoethyl)-benzoxazolone (11% yield for two steps), m.p. 148'-151° C.

[0037] B. To a 100 ml round-bottomed flask equipped with magnetic stirrer, condenser, and nitrogen inlet were added 0.618 g (2.10 mmol) of N-(1-naphthyl)piperazine 0.472 g (1.95 mmol) of 6-(2-bromoethyl)-benzoxazolone,

0.411 ml (2.92 mmol) of triethylamine, 50 ml ethanol, and a catalytic amount of sodium iodide. The reaction was refluxed for 3 days, cooled, and evaporated to a brown gum. The gum was partitioned between 50 ml water and 75 ml methylene chloride, the pH adjusted with aqueous 1 N sodium hydroxide solution, and a little methanol added to facilitate phase separation. The methylene chloride layer was dried over sodium sulfate and evaporated, then chromatographed on silica gel. Fractions containing the product were combined and evaporated, the residue taken up in ethyl acetate, treated with hydrochloride gas, and the resulting hydrochloride salt of the product filtered off to give the while solid title compound, m.p. 282°-285° C., 213 mg (23% yield).

EXAMPLE 17

[0100] 6-(4-(2-(3-Benzisothiazolyl)piperazinyl)ethyl)phenyl)benzothiazolone

[0101] To a 100 ml round-bottomed flask equipped with condenser and nitrogen in let were added 1.03 grams (4 mmol) 6-(2-bromoethyl)-benzothiazolone, 0.88 grams (4 mmol) N-benzisothiazolylpiperazine, 0.84 grams (8 mmol) sodium carbonate, 2 mg sodium iodide, and 40 ml methylisobutyl ketone. The reaction was refluxed 36 hours, cooled, filtered, and the filtrate evaporated. The residue was chromatographed on silica gel using ethyl acetate as eluent to afford an oil, which was taken up in methylene chloride and precipitated by addition of ether saturated with HCl. The solid was filtered, washed with ether, dried briefly, washed with a minimal amount of acetone and dried to afford a white solid, m.p. 288°-290° C., 1.44 grams (76.7%).
